

OMC 2017

OFFSHORE MEDITERRANEAN CONFERENCE & EXHIBITION

Despite the turbulence in the market, with low oil prices impacting many producers and those in the supply chain, the last OMC, held on **25-27 March**, has bucked all the trends with conference delegate registration up 10% on 2013 event.

Over three days, a wealth of industry professionals and decision-makers attended OMC to share ideas, new researches, innovations and the latest developments impacting the exploration and production activities in the Mediterranean Sea.

Critical issues covered included new technologies and equipment, advances in safety and accident prevention, enhanced recovery methods and deepwater & subsea.

Italy strives to lead the world in making onshore & offshore plants safer, through best practices and the use of integrated control systems.

Levers to improve gas availability and reduce cost are there: untapped potential of the Levantine Basin, the exploration activity in Croatia, Greece and Albania, a great potential of internal interconnection. Italy might also play a significant role having a potential of 700 Mtoe and significant storage facility. A side benefit to attract investments of over 15 bn € in the next 4 to 5 years.

GIUSEPPE TANNOIA,
Eni Executive VP Central and South Europe Region
